SUMMARY

Flutter & Mobile Engineer with merged code in the **Flutter SDK** and **Flutter DevTools**, and 10 merged pull requests across Pigeon, path_provider, the React Native docs, Supabase, and Sentry. 4+ years shipping production systems for enterprise clients, including apps used by 20,000+ employees and an NFC-based fraud prevention system. Stack covers Flutter, React Native, Go, and ASP.NET Core, with hands-on DevOps running CI/CD on self-hosted infrastructure.

EXPERIENCE

Software Developer — KDS Group

Jun 2022 – Present

Full-stack mobile and infrastructure engineer building enterprise applications across HR, manufacturing, and analytics for 20,000+ employees.

- **KDS Portal:** Improved HR processing speed by **40%** with a Flutter-based HRMS app integrated with ERP for employee self-service across attendance, leave, salary, and loans.
- **KDS Zakat:** Cut fraudulent distributions by **99.99%** across 20,000+ employees with an NFC-based distribution system in Flutter, built on offline-first architecture, background sync, and real-time SignalR updates.
- **KDS QMS:** Replaced paper-based garment factory inspections with a React Native quality control system and an Angular management dashboard, cutting inspection delays by **80%**.
- **KDS TLS:** Shipped a real-time Traffic Light System in React Native for the garment industry: operators log machine assignments, styles, and performance with defect tracking on the floor. Extended it with an AI-powered Next.js assistant on an MCP server, letting managers query live production data in natural language.
- **KDS TPM:** Digitized breakdown and scheduled maintenance workflows in a Flutter app where workers log machine issues in real time and track the full resolution lifecycle, giving management visibility into maintenance activity.
- **DevOps & Infrastructure:** Migrated all production servers from Windows to Ubuntu into a dual-server setup that reduced downtime by 50%. Introduced GitLab CI/CD with Docker so the whole team deploys with a single git push, replacing a manual process, and stood up Prometheus and Grafana for monitoring.
- **Microservices:** Consolidated all company assets into a self-hosted file storage and CDN platform built with Go (Fiber) and ASP.NET Core, and delivered internal Mailing and Push Notification microservices now used across all applications.

Front-end Engineer — Trigan

Feb 2022 – Jun 2022

- Developed the Next.js-based main website for Trigan.org, focusing on responsiveness and SEO optimization.

Software Engineer Intern — ZorgIT Group

Dec 2021 – Feb 2022

- Developed a modern portfolio website for Arcon Interior to boost brand reach and client engagement.

EDUCATION

Premier University, Chattogram — B.Sc. in Computer Science & Engineering

Fall 2016 – Jun 2021

- GPA: 3.21
- Final Project: P2P loan platform built with Laravel (backend) and Next.js (frontend) for secure, direct lending.

Premier University, Chattogram — MBA in Finance

Mar 2022 – May 2024

- GPA: 3.74

OPEN SOURCE

Ten merged pull requests to major open-source projects, reviewed and shipped by their maintainers:

- **Flutter Framework** (flutter/flutter) — Two merged fixes to the flutter create templates so new app and plugin example projects pass dart format out of the box. [PR #187443](#) · [PR #188382](#)
- **Flutter DevTools** (flutter/devtools) — Fixed a RenderFlex overflow in the debugging controls at narrow widths, closing an issue open since 2022. [PR #9949](#)

- **Flutter Packages** (flutter/packages) — Three merged PRs to Pigeon and path_provider: a clear parser error for unsupported enhanced enums, event-channel lifetime docs in generated Dart, and clarified getDownloadsDirectory semantics (shipped in 2.1.6). [PR #11880](#) · [PR #11894](#) · [PR #11793](#)
- **React Native Docs** (react/react-native-website) — Removed an outdated TextInput multiline border caveat, corrected across all localized copies of the page. [PR #5200](#)
- **Supabase Flutter SDK** (supabase/supabase-flutter) — Fixed a realtime channel-rejoin crash from an expired cached JWT after long backgrounding; shipped in realtime_client 2.7.4. [PR #1365](#)
- **Sentry Dart/Flutter SDK** (getsentry/sentry-dart, 1M+ downloads) — Two production fixes shipped in v9.21.0: silent error-swallowing in runZonedGuarded and broken Web diagnostic logging. [PR #3697](#) · [PR #3698](#)

PROJECTS

- **Snake Classic** (Flutter) — Modern reimaging of the classic Snake game with smooth animations, leaderboards, and power-ups. **10,000+ downloads.** github.com/theprantadutta/snake_classic · [Play Store](#) · [App Store](#)
- **AI Persona** (Flutter + Gemini + Firebase) — LLM-powered character chat app with customizable personas, voice, and knowledge bases. github.com/theprantadutta/ai_persona · [Play Store](#)
- **Cosmo Strike** (Flutter + Flame + ASP.NET Core 10) — Retro side-scrolling shmup: a 12-level choreographed campaign, multi-phase bosses, and a full live-service layer on an offline-first sync engine. github.com/theprantadutta/cosmo_strike_flutter_app · [Play Store](#)
- **Atlas** (Flutter + ASP.NET Core + AI) — Gamified habit tracker with a living world map, an AI companion writing weekly reflections, and real-time SignalR sync. github.com/theprantadutta/atlas_flutter_app · [Play Store](#)
- **PinPoint** (Flutter + ASP.NET Core) — Privacy-first note-taking app with end-to-end encryption, multiple note types, and a backend API. github.com/theprantadutta/pinpoint · [Play Store](#) · [App Store](#)
- **The Accountant** (Flutter + ASP.NET Core) — Privacy-focused personal finance app with multi-account tracking and budgets. github.com/theprantadutta/the_accountant · [Play Store](#)
- **Odyssey** (Flutter + ASP.NET Core) — Offline-first travel journal with geotagged memories, multi-currency budgets, trip templates, and collaborative sharing. github.com/theprantadutta/odyssey · [Play Store](#)
- **FreeWay** (ASP.NET Core + AI Gateway) — Self-built AI gateway proxying OpenRouter with per-project usage tracking, key management, and quotas. github.com/theprantadutta/freeway
- **FileRunner** (Rust + Next.js) — Self-hostable file management and CDN platform with secure uploads and API-key auth. github.com/theprantadutta/filerunner
- **RustyPotato** (Rust) — High-performance Redis-compatible key-value store achieving over 1M ops/sec on GET operations. github.com/theprantadutta/rustypotato

AI & AUTOMATION

- Built production AI assistants for enterprise systems serving 20,000+ employees using OpenAI, Gemini, and Claude APIs, including an MCP server architecture that lets non-technical users query live PostgreSQL production data in natural language.
- Automated daily report generation and data enrichment pipelines using Hangfire, processing 50,000+ records per day.

SKILLS

Languages: Dart, TypeScript, JavaScript, Go, C#, Rust, Python, SQL

Frameworks: Flutter, React Native, Next.js, Node.js, ASP.NET Core

DevOps & Data: Docker, GitLab CI/CD, Prometheus, Grafana, Nginx, PostgreSQL, Firebase, SignalR

AI & Hardware: OpenAI, Gemini, Claude, DeepSeek, MCP, Speech/Text APIs, NFC, Barcode, Arduino, Raspberry Pi

HIGHLIGHTS

- Available for remote work globally — UTC+6, flexible on overlap hours.
- Shipped products — 8 apps live on Google Play and the App Store, 11,000+ combined downloads, led by Snake Classic at 10,000+.
- Open-source contributor — 10 merged PRs across Flutter Framework, Flutter DevTools, Pigeon, path_provider, React Native docs, Supabase, and Sentry, plus published [Tiny State](#) on pub.dev.
- Technical writer — 123,000+ post views and 5,700+ followers across 65 posts on [Dev.to](#).
- Self-managed DevOps — fully architecting and maintaining production infrastructure independently.
